

Introducing GREEN2VIEW®

Sustainability reporting and disclosure

Sustainability reporting has taken a range of forms since the 1990s and has mostly been voluntary. In the face of the need for significant global effort to address climate change impacts and the need to reinvest in nature, regulation has heightened in parallel with a community awareness and expectation of better performance.

This makes sustainability reporting both increasingly important and necessarily transparent. There is now growing attention being paid to public company non-financial disclosures, such as how environmental, social, and governance (ESG) matters are identified, managed and disclosed to stakeholders, especially to investors.

ESG is increasingly being factored into investment analysis and decisions in order to identify and manage risk which now critically includes climate risk¹.

Sustainability reporting is largely guided by the Global Reporting Initiative (GRI) reporting guidelines, however, there are many valuable new measures available and many that might be made and monitored in order to satisfactorily disclose a company's sustainability performance. These might include climate emissions, gender diversity and modern slavery disclosure for example. This makes an adequate reporting process increasingly onerous and complex.

A new opportunity in ESG reporting: "Intelligent Sustainability"

Green2View® is an Australian software and data benchmarking company specialising in Environmental, Social and Governance (ESG) sustainability monitoring and performance intelligence.

Green2View® is a complete ESG sustainability performance management solution, in a single digital platform and help customers achieve a balance between economic requirements, the environment and social responsibility to the community.

GREEN2VIEW®

Green2View® is an innovative solution to support customers align with international sustainability charters and principles while at the same time combining their own internal ESG policies and procedures. Green2View's clever design enables 'seamless choice' so that customers can choose the guidelines they want and need.

Guidelines include but are not limited to:

- Principles for Responsible Investment. 
- The Taskforce on Climate Related Financial Disclosure. 
- The Investor Group on Climate Change. 
- Australian Securities and Investment Commission. 
- United Nations Sustainable Development Goals (SDGs). 
- World Business Council for Sustainable Development. 
- United Nations Global Compact. 
- Global Reporting Initiative. 
- Carbon Disclosure Project. 
- Sedex. 
- Australian Securities Exchange. 
- National Greenhouse and Energy Reporting. 
- B Corporation. 
- Australian Packaging Covenant. 

The Green2View ESG platform provides a "real-time" secure cloud-based sustainability reporting, benchmarking and communications solutions dynamic platform creating an "environment of transparency" around ESG data, performance, compliance and reporting including supply chain.

Raw data is turned into 'sustainability intelligence'. Key ESG performance metrics, policies, reports, and tangible actions are captured, monitored and analysed, and delivered via user-friendly, interactive visual dashboards. This 'visual snapshot' of a company's sustainability position can assist in driving operational efficiencies, enhance brand value and enrich stakeholder engagement through tailored messaging e.g. customers, investors, regulators, employees, management and board.

In partnership with Green2View, ReThink Sustainability is able to offer Green2View for suitable projects. Please contact us for more information:
